

Course Description																													
Course title:	Designing and Organization of Storage and Handling Systems																												
Neptun code:	PRODLOG_S8_DOSH																												
Type (core, specialization, optional, dissertation, other):	core																												
Lecture/ Seminar (practical); hours per week:	2/2																												
Name and position of lecturer:	Tynchtyk Mukanov; Supply chain manager Gallery Ltd																												
Contact of lecturer:	tynchtyk.mukanov@gmail.com																												
Prerequisite course(s):	no																												
Language of the course:	English																												
Suggested semester: autumn /spring, 1-4	2																												
Number of credits:	5																												
Requirements (exam/practical mark/signature/report, essay):	s, m																												
Course objectives (50-100 words):	Design of warehousing and distribution systems is a science that reflects the cultures of particular design teams. Warehouses are often designed and operated by third party logistics companies with tight margins. Therefore, there is increased pressure to design warehouses that are flexible and adaptable, even while the available information is incomplete.																												
Course structure:	<table border="1"> <thead> <tr> <th>Week</th> <th>Topic</th> </tr> </thead> <tbody> <tr><td>1.</td><td>Management of warehouse systems</td></tr> <tr><td>2.</td><td>Packaging and logistics units</td></tr> <tr><td>3.</td><td>Acceptance and receipt of goods</td></tr> <tr><td>4.</td><td>Storage</td></tr> <tr><td>5.</td><td>Warehouse management system</td></tr> <tr><td>6.</td><td>Conveyor control and monitoring systems</td></tr> <tr><td>7.</td><td>Collection, processing and visualization of data</td></tr> <tr><td>8.</td><td>Inventory</td></tr> <tr><td>9.</td><td>Basic data and key performance indicators of warehouse systems</td></tr> <tr><td>10.</td><td>Optimization of warehouse processes</td></tr> <tr><td>11.</td><td>Warehouse systems</td></tr> <tr><td>12.</td><td>Sorting and distribution systems</td></tr> <tr><td>13.</td><td>Distribution technology</td></tr> </tbody> </table>	Week	Topic	1.	Management of warehouse systems	2.	Packaging and logistics units	3.	Acceptance and receipt of goods	4.	Storage	5.	Warehouse management system	6.	Conveyor control and monitoring systems	7.	Collection, processing and visualization of data	8.	Inventory	9.	Basic data and key performance indicators of warehouse systems	10.	Optimization of warehouse processes	11.	Warehouse systems	12. Course Description																													
Course title:	Economics and Cost Analysis																												
Neptun code:	PRODLOG_S7_ECA																												
Type (core, specialization, optional, dissertation, other):	core																												
Lecture/ Seminar (practical); hours per week:	2/2																												
Name and position of lecturer:	Shakirova Klara Kapanovna																												
Contact of lecturer:	nauka-kg@mail.ru																												
Prerequisite course(s):	no																												
Language of the course:	English																												
Suggested semester: autumn /spring, 1-4	2																												
Number of credits:	5																												
Requirements (exam/practical mark/signature/report, essay):	s, m																												
Course objectives (50-100 words):	Knowing how to conduct economic analysis at the enterprise and its main structural divisions and how to evaluate the production potential of the enterprise and its usage. Applying the results of factor analysis to justify management decisions and determine the financial condition of the company and trends its development. Analyzing of the socio-economic essence of cost management. Approaching production calculation technology. Familiarizing with the legal basis of pricing and cost management, the practice of preparing cost estimates and budgets and studying of classical and modern methods of cost management.																												
Course structure:	<table border="1"> <thead> <tr> <th>Week</th> <th>Topic</th> </tr> </thead> <tbody> <tr> <td>1.</td> <td>The concept of a modern enterprise. External and internal environment. Enterprise functions.</td> </tr> <tr> <td>2.</td> <td>Concept and classification of fixed assets.</td> </tr> <tr> <td>3.</td> <td>Methods of calculating depreciation, performance indicators.</td> </tr> <tr> <td>4.</td> <td>Composition and structure of working capital. Course Description																	
Course title:	Lean fundamentals																
Neptun code:	GEALT142-Ma																
Type (core, specialization, optional, dissertation, other):	core																
Lecture/ Seminar (practical); hours per week:	2/2																
Name and position of lecturer:	Prof. Dr. Péter Tamás, professor																
Contact of lecturer:	peter.tamas@uni-miskolc.hu																
Prerequisite course(s):	no																
Language of the course:	English																
Suggested semester: autumn /spring, 1-4	2																
Number of credits:	5																
Requirements (exam/practical mark/signature/report, essay):	s, m																
Course objectives (50-100 words):	The course introduces the lean management philosophy and its tools. At the end of the course, students will be able to analyze and improve material flow systems in line with the lean philosophy.																
Course structure:	<table border="1"> <thead> <tr> <th>Week</th> <th>Topic</th> </tr> </thead> <tbody> <tr> <td>1.</td> <td>The history of the development of Lean.</td> </tr> <tr> <td>2.</td> <td>5 principles.</td> </tr> <tr> <td>3.</td> <td>Methods to define value-creating, non-value-creating processes, and losses (MURI, MUDA, MURA).</td> </tr> <tr> <td>4.</td> <td>Steps to draw a value stream map.</td> </tr> <tr> <td>5.</td> <td>Preparation of a present and future state map.</td> </tr> <tr> <td>6.</td> <td>Introduction to Lean tools (5S, Andon system, visual management principles, Poka Yoke, SMED, Pull principle, JIT, Kanban, Jidoka, Heijunka, Kaizen, etc.).</td> </tr> <tr> <td>7.</td> <td>Application of Lean tools in practice.</td> </tr> </tbody> </table>	Week	Topic	1.	The history of the development of Lean.	2.	5 principles.	3.	Methods to define value-creating, non-value-creating processes, and losses (MURI, MUDA, MURA).	4.	Steps to draw a value stream map.	5.	Preparation of a present and future state map.	6.	Introduction to Lean tools (5S, Andon system, visual management principles, Poka Yoke, SMED, Pull principle, JIT, Kanban, Jidoka, Heijunka, Kaizen, etc.).	7.	Application of Lean tools in practice.
Week	Topic																
1.	The history of the development of Lean.																
2.	5 principles.																
3.	Methods to define value-creating, non-value-creating processes, and losses (MURI, MUDA, MURA).																
4.	Steps to draw a value stream map.																
5.	Preparation of a present and future state map.																
6.	Introduction to Lean tools (5S, Andon system, visual management principles, Poka Yoke, SMED, Pull principle, JIT, Kanban, Jidoka, Heijunka, Kaizen, etc.).																
7.	Application of Lean tools in practice.

Course Description																													
Course title:	Mechatronics in Logistics																												
Neptun code:	GEALT196-Ma																												
Type (core, specialization, optional, dissertation, other):	core																												
Lecture/ Seminar (practical); hours per week:	2/2																												
Name and position of lecturer:	Dr. Ákos Cservenák, senior lecturer																												
Contact of lecturer:	cservenak.akos@uni-miskolc.hu																												
Prerequisite course(s):	no																												
Language of the course:	English																												
Suggested semester: autumn /spring, 1-4	2																												
Number of credits:	5																												
Requirements (exam/practical mark/signature/report, essay):	s, e																												
Course objectives (50-100 words):	Nowadays, in logistics, material handling cannot be carried out without the use of various mechatronic equipment and tools. The aim of the course is to present the concept and subject areas of mechatronics to students of logistics engineering. Mechatronics covers three main disciplines, and the subject presents them as well. Another element of the subject is the fit of mechatronics into logistics.																												
Course structure:	<table border="1"> <thead> <tr> <th>Week</th> <th>Topic</th> </tr> </thead> <tbody> <tr> <td>1.</td> <td>Presentation of the concept of mechatronics</td> </tr> <tr> <td>2.</td> <td>History of mechatronics</td> </tr> <tr> <td>3.</td> <td>Detailing the disciplines of mechatronics</td> </tr> <tr> <td>4.</td> <td>Overview of actuators</td> </tr> <tr> <td>5.</td> <td>Overview of hydraulic systems</td> </tr> <tr> <td>6.</td> <td>Overview of pneumatic systems</td> </tr> <tr> <td>7.</td> <td>Overview of electric motors</td> </tr> <tr> <td>8.</td> <td>Sensor overview</td> </tr> <tr> <td>9.</td> <td>Automation of material handling equipment and devices with mechatronic devices</td> </tr> <tr> <td>10.</td> <td>Overview of industrial robots</td> </tr> <tr> <td>11.</td> <td>Programming of industrial robot</td> </tr> <tr> <td>12.</td> <td>Industrial robot simulation</td> </tr> <tr> <td>13.</td> <td>Mechatronic devices in road vehicles</td> </tr> </tbody> </table>	Week	Topic	1. Course Description		
Course title:	Modeling and Simulation of Transport Systems	
Neptun code:	GEALT197-Ma	
Type (core, specialization, optional, dissertation, other):	core	
Lecture/ Seminar (practical); hours per week:	2/2	
Name and position of lecturer:	Dr. Róbert Skapinyecz, associate professor	
Contact of lecturer:	altskapi@uni-miskolc.hu	
Prerequisite course(s):	no	
Language of the course:	English	
Suggested semester: autumn /spring, 1-4	4	
Number of credits:	4	
Requirements (exam/practical mark/signature/report, essay):	s, m	
Course objectives (50-100 words):	During the course, students will be introduced to the structure of the road transport system, the basics of road traffic and public transport modeling, the use of modern traffic simulation and traffic planning software, and the application possibilities of the latter.	
Course structure:	Week	Topic
	1.	The concept and purpose of transport. Modal split, transport cooperation and coordination.
	2.	Transport system and subsectors. The system of road transport: road network, means and indicators of road passenger transport, traffic technology.
	3.	Advanced tools for measuring road traffic.
	4.	Quality indicators and characteristic parameters of public transport. Sustainability in transport.
	5.	Parameters describing road traffic flows. Typical traffic generation, traffic distribution, traffic sharing and traffic load models.
	6.	Advanced traffic management strategies. The purpose of traffic simulations and their application possibilities.
	7.	Introduce students to the main functions of the traffic simulation environment to be used during the semester. Creating a simple intersection, setting priority rules, creating a roundabout, defining public transport in the simulation environment.
	8.	Creating intersections with traffic lights, setting up pedestrian traffic, using 3D objects in the simulation environment.
	9.	Creating and examining complex traffic nodes with traffic signal control using the simulation environment.
	10.	Introduce students to the main functions of the traffic planning software to be used during the semester.
	11.	Defining traffic zones, creating traffic networks, defining traffic flows, and applying different traffic models in the traffic planning software.
	12.	Creating a public transport network, defining and applying timetables in the transport planning software.
	13.	Modeling and examining complex transport networks. Main characteristics of fixed track transport and its application in urban transportation.
Required readings:	1. Tettamanti, Tamás, Tamás Lupsay, and István Varga. "Road Traffic Modeling and Simulation." (2019), Budapest, Hungary: Akadémiai Kiadó, ISBN 978 963 454 385 5 2. Tamás, Péter. „Innovative simulation testing methods in logistics.” (2021), Miskolc-Egyetemváros, Hungary: Miskolci Egyetem, Logisztikai Intézet, ISBN 9789633582398	
Recommended readings:	1. Femke. Kessels. (2018). Traffic Flow Modelling: Introduction to Traffic Flow Theory Through a Genealogy of Models. SPRINGER. ISBN 9783319786940 2. Theeg, G., and S. Vlasenko. "Railway Signalling & Interlocking: Edition." Germany, Leverkusen PMC Media House GmbH (2020).
