

## PACKAGING LOGISTICS PROCESS SIMULATION

The focus of the competence area is the planning and development of packaging logistics processes using simulation modelling. This activity is gaining prominence as the role of environmental awareness grows.

### COMPETENCES

- Evaluation of packaging processes
- Design of packaging logistics processes
- Development of packaging logistics processes

### SERVICES

- Design and development of packaging logistics processes
- Provide needle-like training for simulation testing of packaging processes

### TOOLS

- Tecnomatix Plant Simulation Industrial Version
- Factory CAD software
- 12 teaching workstations

### REFERENCES

- Development of parametric simulation test models for the test of material flow system variants of engines and associated unit cargo training devices between take-off and drop-off points for AUDI HUNGARIA Zrt.
- Carrying out innovative design tasks for warehouse design and production line material supply for CLAAS Hungária Kft.
- Determination of the storage capacity of the coffers for ISI Automotive Hungary Kft.
